Note B : Some substances (acids, bases, etc.) are placed on the
market in aqueous solutions at various concentrations and,
therefore, these solutions require different classification and
labelling since the hazards vary at different concentrations. In
Part 3 entries with Note B have a general designation of the
following type: "nitric acid ...%". In this case the supplier must
state the percentage concentration of the solution on the label.
Unless otherwise stated, it is assumed that the percentage
concentration is calculated on a weight/weight basis.
