

PRODUCT INFORMATION

a product brand of KLÜBER LUBRICATION

OKS 310
MoS_2 High-Temperature Lubricant

Description

OKS 310 is a high-temperature oil with MoS_2 for lubrication of machine elements up to +450°C.

Applications

- Lubrication of friction and rolling bearings, chains, joints or slideways at higher temperatures
- For conveying systems under radiation heat in painting, stoving and drying systems, travelling grates in firing systems
- Dry lubrication at temperatures above 200°C
- Lubrication of elastomers and plastics not resistant to mineral oil

Advantages and benefits

- Highly suitable as a high-temperature lubricant
- Very effective due to finest, homogeneous MoS_2 distribution in the oil
- Resistant to water and many chemicals, fuels, lubricants and hydraulic oils

Branches

- Chemical industry
- Glass and foundry industry
- Rubber and plastic processing
- Rail vehicle technology
- Municipal services
- Plant and machine (tool) engineering
- Iron and steel industry
- Logistics
- Paper and packaging industry
- Shipbuilding and marine technology

Application tips

For best adhesion, clean the surfaces. Best way is to clean mechanically first and then with OKS 2610/OKS 2611 universal cleaner. With a brush, drip oiler or by immersion or using a suitable automatic lubrication system, apply a sufficient quantity to the locations to be lubricated. If at all possible, avoid excess. Observe the machine manufacturer's instructions. Assess the lubrication frequency and quantity on basis of service conditions. Only mix with suitable lubricants.

Packaging

- 1 l Bottle
- 5 l Canister
- 25 l Canister

The data in this document is based on our general experience and knowledge at the time of publication and is intended to give information of possible applications to a reader with technical experience. It constitutes neither an assurance of product properties nor does it release the user from the obligation of performing preliminary field tests with the product selected for a specific application. All data are guide values which depend on the lubricant's composition, the intended use and the application method. The technical values of lubricants change depending on the mechanical, dynamical, chemical and thermal loads, time and pressure. These changes may affect the function of a component. We recommend contacting us to discuss your specific application. If possible we will be pleased to provide a sample for testing on request. Klüber products are continually improved. Therefore, Klüber Lubrication reserves the right to change all the technical data in this document at any time without notice.
